Course Objective

To provide students with a sound **grounding of scientific, methodological and technological fundamentals in the Semantic Web domain** that will be later used to build applications that can integrate, combine and infer heterogeneous and distributed information.

Content and Schedule

Monday 15th November. 9.00-14.00

Section 1: Introduction to the Semantic Web (theory: 1 hour)

(Mari Carmen Suárez-Figueroa)

- General overview of the semantic web with special emphasis on ontologies and resources annotation (documents, texts, web pages, web services, DBs, etc). Description of the types of problems this technology can be applied to.

Section 2: Computational linguistics (theory: 2 hours, hands-on: 2 hours)

(Elena Montiel-Ponsoda)

- Introduction to some computational linguistics concepts useful in building ontologies (terminological aspects: concepts, terms, relations between them, definitions, etc). Types of terminological resources (lexicons, thesauri, mono-, multilingual dictionaries, controlled-language vocabularies, terminological DBs) that can be used as a starting point in ontology building.
- Introduction to multilingual issues in ontologies.

Content and Schedule

Thuesday 16th November. 9.00-14.00

Section 3: Ontologies (theory: 3 hours, hands-on: 2 hours)

(Mari Carmen Suárez-Figueroa)

- **Theoretical aspects: definition, scope, types of ontologies, ontology repositories.**
- **Life cycles and development methodologies used in building ontologies and ontology networks through collaborative work.**

Content and Schedule

Wednesday 17th November. 9.00-13.00

Section 3: Ontologies (theory: 1 hour)

(Boris Villazón-Terrazas)

- **Life cycles and development methodologies used in building ontologies and ontology networks through collaborative work.**

Section 4: Applications in the Semantic Web (theory: 3 hours)

(Boris Villazón-Terrazas)

- **Applications using semantic web technologies that have been built in national and European projects in different domains (e-commerce, knowledge management, semantic portals, etc.).**
- **Introduction to Linked Data.**
- **A Linked Data use case.**

Content and Schedule

Thursday 18th November. 9.00-14.00

Section 3: Ontologies (theory: 2 hours, hands-on: 1 hour)

(Raúl García-Castro)

- **Languages used in ontology implementation (RDF(S) and OWL) as well as query languages (SPARQL).**

Section 3: Ontologies (theory: 2 hours)

(Raúl García-Castro)

- **Tools used in building and storing ontologies (Sesame, Jena, Protégé, NeOn toolkit) as well as in ontology reasoning (Pellet, Racer).**

Content and Schedule

Friday 19th November. 9.00-13.00

Section 3: Ontologies (hands-on: 1 hour)

(Raúl García-Castro)

- Tools used in building and storing ontologies (Sesame, Jena, Protégé, NeOn toolkit) as well as in ontology reasoning (Pellet, Racer).

Section 3: Ontologies (hands-on: 1 hour)

(Elena Montiel-Ponsoda)

- Life cycles and development methodologies used in building ontologies and ontology networks through collaborative work.

Exam: (2 hours)

(Mari Carmen Suárez-Figueroa)

- Each group will have 7-10 minutes to present its work
- Presentations should summarize all the hands-on tasks carried out during the course
