AI4LABOUR SECONDMENT

AI4LABOUR (2021-2025)

Reshaping labour force participation with AI.

1. Predict which works are in risk because of AI.
2. Offer training options for these workers so they can get another job before theirs is automatized.

- Crawling information from different sources (MOOCs like Coursera, EdX, Udemy; universities) and databases.
- Link skills, tasks and jobs from different sources (EU, EEUU) and normalize them by using similarity techniques.
- Represent all the information in the form of a enriched knowledge graph so it can be queried.
